Progress Report

Project Aqueous

Number 6

School of Physics and Astronomy
University of Glasgow

May 2017

a title for abstract

A brief summary of the report.

a title for acknowledgements

The contributions of Number 2 and Number 1 are acknowledged.

Contents

Chapter 1

a title for introduction

Higgs bosons

Higgs bosons are particles that arise through electroweak symmetry breaking. A principal motivation for the Large Hadron Collider physics programme was the testing of the theory of electroweak symmetry breaking, through the observation of Higgs bosons. In July of 2012, the existence of the Higgs boson was confirmed by the ATLAS and CMS experiments. Following this discovery, further studies have been ongoing in order to examine the character of the particle.

Chapter 2

a title for chapter 1

section 1

This is content.

time

A few time representations follow:

- 2017-05-08
- 8 May 2017
- May 2017
- 165418
- 1654
- 2017-05-08T165418
- 2017-05-08T1654

units and units typesetting

- $a^b\,\mathrm{m}^2$ – correct unit typesetting (manual siunitx function) (preferred for mathematics mode, though note that the function for this is provided by aqueous [see below for manual equivalent method not dependent on aqueous])
- $10\,\mathrm{kg}$ – correct unit typesetting (siunitx)
- $10\,\mathrm{kg}$ – incorrect unit typesetting (mathematics, textnormal)
- 10 kg – incorrect unit typesetting (literally)
- $10\,\mathrm{kgms}^{-2}$ – correct unit typesetting (siunitx)
- $10^{-28}\,\mathrm{m}^2$ – correct unit typesetting, though very manual (siunitx)

- $a^b\,\mathrm{m}^2$ – correct unit typesetting, though manual (siunitx) (preferred for mathematics mode)
- $\mathrm{a^b\,m^2}$ – dodgy, manual correct unit typesetting (siunitx)
- $a^b\,\mathrm{m}^2$ (siunitx)
- The angle is 14°.
- The temperature is $14\,^\circ\mathrm{C}$. – correct unit typesetting (siunitx)

mathematics

The following is a referenced equation:

$$E = mc^2 \tag{2.1}$$

This is a reference to equation 2.1.

lists

This is a list:

- function,
- Job,
- JobGroup,
- ParallelJobProcessor and
- pool.

This is a checklist:

✓ item

✓ item

- ✓ subitem
- ✓ subitem
  - ✓ subitem

code

This is some code:

```
Reco_tf.py --inputBSFile data12.1234.RAW --outputESDFile data12.1234.ESD
```

images

This is a figure set to a defined width:

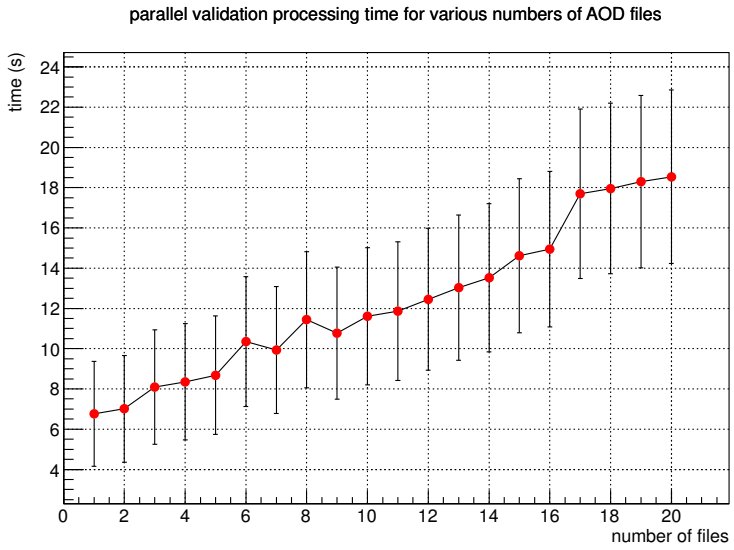

Figure 2.1: parallel job processor: large efficiency improvement as a result of parallelisation

This is a figure set to the text width:

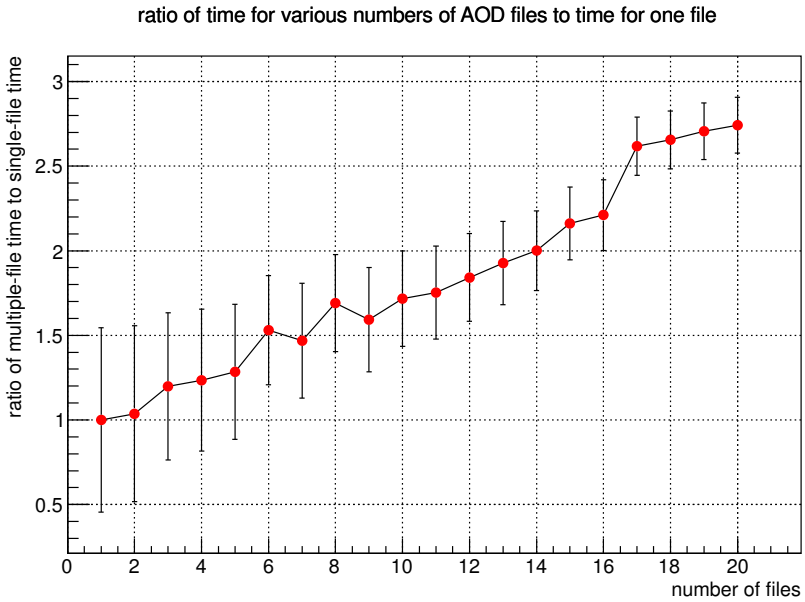

Figure 2.2: parallel job processor

references

This is a reference to figure 2.2. This is a reference [1]. This is another reference [2]. This is a URL: https://github.com/wdbm/aqueous

ROOT

ROOT [3] is an object oriented data analysis framework aimed at solving data analysis challenges in high energy physics. While *ROOT* is simply a name, a possible acronym for the system could be *"Rapid Object-Oriented Technology"* [4]. ROOT was developed in the context of the NA49 experiment at CERN. NA49 generated data of approximately 10 TB per run. This rate of data provided a test environment for the development of ROOT, as the next generation of data analysis. ROOT features *Cling*, a C++ interpreter.[1]

[1] This is a footnote.

tables

input file option	description
`--inputHitsFile`	input only
`--inputBSFile`	RAW data (BS = ByteStream), currently input only
`--inputRDOFile`	
`--inputESDFile`	
`--inputAODFile`	

output file option	description
`--outputRDOFile valid`	if starting from Hits
`--outputESDFile valid`	if starting from Hits, RDO or BS
`--outputAODFile valid`	if starting from ESD or anything else upstream
`--outputNTUP_XXXFile`	can be made from ESD or AOD, BS or RDO

Figure 2.3: Reco_tf.py usage

Chapter 3

a title for future

future plans and considerations

These are suggestions and plans for the future.

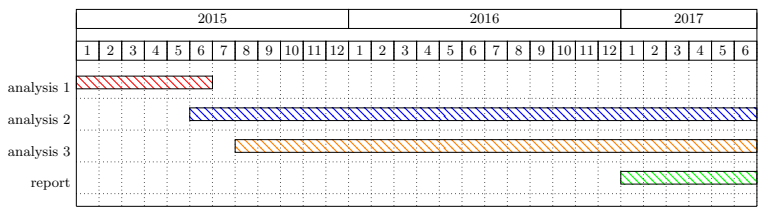

Figure 3.1: Gantt chart of work
